-  **100% Money Back** Guarantee
-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

### QUESTION 1

Which network components are tracked by Aruba Clarity? (Choose two.)

- A. WLAN health
- B. Wireless associations
- C. Client health
- D. DNS lookups
- E. AP and controller health

Correct Answer: BD

---

### QUESTION 2

An administrator configures an ArubaOS-Switch for per-user tunneled node. Which protocols does the switch use to establish and maintain a connection with the Aruba Mobility Controller (??)? (Choose two.)

- A. PAPI
- B. GRE
- C. IPSec
- D. SSL

Correct Answer: AB

---

### QUESTION 3

An administrator examines the configuration of an AP from apboot mode shown in the exhibit. What can the administrator determine from the configuration?

```
apboot> printenv
servername=aruba-master
name=AP1
group=apgroup1
cert_cap=1
backup_vap_init_master=10.1.10.100
cfg_lms=10.1.10.101
num_total_bootstrap=14
backup_vap_password=53FFDA786630C9...
nodelist=10.1.10.100,10.1.10.101
stdin=serial
<-output omitted->
```

- A. The RAP terminated on a Mobility Master.
- B. The AP terminated on a non-cluster Mobility Controller.
- C. The AP terminated on a Mobility Controller in a cluster.
- D. The RAP terminated on a stand-alone controller.

Correct Answer: C

---

#### QUESTION 4

Refer to the exhibit.

An AP is connected to a cluster of controllers. An AAA server provides all authentication and authorization functions for wireless users. A wireless user connects to an AP, and Active User Anchor Controller (AUAC) and Standby UAC (S-UAC) tunnels are built from the AP to the respective controllers in the cluster.

Why would an administrator create four VRRP groups with four Virtual IP (VIP) addresses in the cluster?

- A. to allow the AAA Server to enforce RADIUS CoA in case the A-UAC experiences an outage
- B. to allow High Availability (HA) Fast Failover to function in case a controller experiences an outage
- C. to allow the AP to establish redundant AP Anchor Controller (AAC) connections to the cluster
- D. to provide a VRRP group for election of the cluster leader

Correct Answer: A

### QUESTION 5

A Microsoft RADIUS server is used to centralize AAA functions by a company. Upon a successful authentication lookup performed by an Aruba Mobility Controller (MC), the administrator wants to have the RADIUS server pass back the correct post-authentication role name that the controller should apply to the user's traffic.

Which additional task must the administrator perform for the controller's configuration to implement this process?

- A. Configure the server-derived rules on the controller.
- B. Install ClearPass's VSA file on the controller.
- C. Install Microsoft's VSA file on the controller.

D. Enable AAA on the controller.

Correct Answer: A

### QUESTION 6

What can the administrator determine from the configuration shown below?

```
(CT1) [mynode] #show switches
```

```
All Switches
```

IP Address	IPv6	Name	Location	Type	Model	Version	Status	Configuration State...
192.192.192.1	None	CT1	Building1	master	ArubaMM	8.0.0.0	up	UPDATE SUCCESSFUL
192.192.192.2	None	CT2	Building1	standby	ArubaMM	8.0.0.0	up	UPDATE SUCCESSFUL
192.192.189.1	None	LC1	Building1	MD	Aruba7010	8.0.0.0	up	UPDATE SUCCESSFUL
192.192.189.2	None	MM2	Building1	MD	Aruba7240	8.0.0.0	up	UPDATE SUCCESSFUL

```
Total Switches:5
```

- A. ??2 is the Mobility Master.
- B. All the controllers run in standalone mode.
- C. All the controllers run in a cluster.
- D. VRRP is used for Mobility Master redundancy.

Correct Answer: D

### QUESTION 7

An administrator supports a cluster of four Aruba Mobility Controllers (MCs) with management addresses of 10.1.100.101, 10.1.100.102, 10.1.100.103, and 10.1.305.114. The administrator accesses an AP associated with this cluster, reboots it, and accesses apboot mode. The administrator executes the printenv command. Which AP parameter contains the IP addresses of the cluster members that the AP should use to connect to the cluster?

- A. master\_ip
- B. cfg\_lms
- C. servename
- D. nodelist

Correct Answer: D

### QUESTION 8

An administrator adds local administrative accounts to manage the Aruba Mobility Controllers (MCs). Which role should be assigned to an administrator who needs to only generate reports and monitor WLANS and ports?

- A. root
- B. network-operations
- C. location-api-management
- D. AP-provisioning

Correct Answer: B

---

### QUESTION 9

An administrator suspects that the network drops frames between a wireless client and an Aruba Mobility Controller (MC). The administrator wants to examine the frames between the AP and the controller to determine if any frames are missing.

Which solution allows the administrator to use a protocol analyzer to examine the contents of the 802.11 frames between the AP and controller?

- A. Implement decrypt-tunnel mode.
- B. Implement GRE mode.
- C. Implement bridge mode.
- D. Implement split-tunnel mode.

Correct Answer: A

---

### QUESTION 10

An administrator wants to reduce downtime of the wireless network when controllers are upgraded. Which ArubaOS feature should the administrator implement to reduce the amount of downtime the APs will experience at the time of the upgrade process?

- A. AP image preload
- B. Centralized upgrades
- C. AP fast start
- D. AP apboot mode bypass

Correct Answer: A

### QUESTION 11

Refer to the exhibit.

An administrator implements an L2 cluster of Aruba Mobility Controllers (MCs) as shown in the exhibit. An external RADIUS AAA server authentication clients associated with the Active User Anchor Controller (AUAC), where the NAS IP address sent from Controller B is 10.254.1.2.

By default, what happens to the user's session when it is handed over to the Standby UAC (S-UAC) after a failover?

- A. The user's session remains active and RADIUS messages can still be processed between the S-UAC and AAA server.
- B. The user's session remains active, but the AAA server cannot implement RADIUS Change of Authorization (CoA).
- C. The user's session is disconnected and has to reconnect, but the S-UAC automatically updates the NAS-IP address on the AAA server to record the event.
- D. The user's session is disconnected and has to reconnect, and no record of this process is stored on the AAA server.

Correct Answer: A

### QUESTION 12

Refer to the exhibit.

Which controller shown in the exhibit is elected as the cluster leader?

- A. Controller A
- B. Controller ?
- C. Controller C
- D. Controller D

Correct Answer: B

### QUESTION 13

A VIA client tries to initially connect to a corporate office controller through an intermediate firewall. However, the VPN connection fails. The administrator examines the firewall rules and determines that rules for UDP 4500 and UDP 500 are configured.

Which additional protocol must be allowed in the firewall rules to resolve this connection failure?

- A. TCP 22
- B. UDP 8200
- C. ESP
- D. TCP 443

Correct Answer: D
